Problem statement

“

Despite multiple communication channels, Fulbright events at campus fail to reach students due to fragmented, low-engagement systems, resulting in low participation and wasted promotional effort.

Key Insights

“

*Increased promotion creates more noise,
not more engagement.*

”

Students

Miss events due to inbox overload
and information fatigue.

Rarely search actively
(OneStop, posters).

Prefer low-effort, engaging ways
to discover events.

Event

Measure success by
participation, not content quality.

Rely on repeated emails,
which dilute impact.

Organizers

Find offline booths engaging but
costly and hard to scale.

Jobs-to-be-Done

Students (Primary users)

Context: Busy inbox + high friction to search → low motivation to check OneStop/newsletters/posters

JTBD:

- Discover what's happening without extra effort when being busy and overwhelmed
- Stay longer when the experience feels familiar + fun (exploration mode)
- Decide "Is this for me?" in < 10 seconds and take action

Clubs & Departments (Clients)

Context: Content exists, but reach + attention is the bottleneck

JTBD:

- Reliably reach students so promotion effort isn't wasted
- Get simple analytics (views/interactions) to learn what works + justify resources

Our goals

- **To be visible:** Increase event visibility through active discovery
- **To be engaging:** Make discovery engaging enough to sustain attention
- **To be measurable:** Prove visibility + engagement with real usage data

Game Phương Mai

"A playful campus map mini-game where students discover events through exploration and interaction, turning missed announcements into an engaging journey"

mo
mo

Product detail

Familiar campus simulation

The map mimics campus spaces and objects to create “close-to-home” immersion, helping users quickly understand the context and feel curious to explore.

Exploration-driven discovery

Players navigate using WASD / Arrow keys and receive prompts when near checkpoints. (active attention, not passive exposure)

Event delivery formats

Interaction-based (Iteration #1): event info embedded inside a mini-challenge to increase interaction time and memorability.

Event Delivery Format (A/B Testing)

 **Register Now**

 **Play Challenge**

➔ Event Checkpoint A (Control) in Common Area

- Only basic event information.
- Lower information retention (~33%)
- None interactivity

➔ Event Checkpoint B (Treatment) in Makerspace

- Event information + “Register” button + “Play Challenge” button (mini-game).
- Higher information retention (~67%)
- Interactivity: Mini-challenges + action buttons

User journey

Value proposition

Relatability & curiosity

Built on familiar campus spaces and insider mini-game content, the experience feels instantly relatable to Fulbright students.

Curiosity-driven exploration replaces forced information intake, turning event discovery into a playful process.

Interactive discovery

Event information is embedded into short, interactive checkpoints rather than pushed as dense text.

Discovery becomes experiential rather than passive scanning.

High engagement & measurable impact

The platform delivers booth-level engagement without the operational cost of physical presence.

It scales to any number of students online while providing built-in analytics on visibility, interaction, and engagement

Competitor analysis

➡ The activities in the MVP did attract most users

Qualitative insight (1st release)

What worked

- **Relatable & fun:** “thú vị”, “gần gũi”
- **Exploration drives engagement:** users stayed longer once they reached deeper areas (e.g., Makerspace)
- **Active discovery increases attention:** “in explore mode, I’m more willing to read”

What didnt

- **Low recall:** users remembered visuals (e.g., “green poster”) more than event meaning
- **Weak next step:** many “read to know” → no action (CTA unclear / timing / interest)

So we learned

MVP improves **visibility**, but needs better **time-on-info + memorability + clear CTA (iteration)**

Iteration

"Fulbright-like" Experience: Users tend to stay longer when the environment feels familiar and exploratory.

MOTIVATION

Curiosity-Driven: Curiosity is the primary driver that pulls players forward to explore the map.

Visual vs. Detail: Users recognize visual elements (e.g., "the green poster") but often fail to recall specific event details.

MEMORY GAP

Weak Next Action: There is a low conversion rate from noticing content to taking a concrete next step or CTA.

Content Freshness: Players expressed a willingness to return if there is something new or functional to check.

OPPORTUNITY

Novelty as a Driver: Regularly updated challenges and features are essential to trigger repeat visits.

Iteration 1: From "Viewing" to "Interacting"

- **Change:** Transitioned from static posters to embedding event information within interactive mini-challenges following a "Play -> Reveal -> CTA" flow.
- **Why:** To make discovery fun and help students remember event details longer.
- **Hypothesis:** Interactive games will lead to more clicks and better memory than static info.

Iteration 2: Enhancing Retention Through Variety

- **Change:** Added a variety of mini-games and rotated challenge content during the testing period.
- **Why:** To keep the experience fresh and give students a reason to return and see "what's new".
- **Hypothesis:** Constant updates will increase the number of repeat visits and total interactions per user.

mo
mo

Data

Result #2

Reach & Exploration

- 291 page views from 58 unique users.
- Total of 142 active users across both test phases.

Deep Interaction

- 192 interactions for "Kera Candy Balance" game.
- Average of 12.8 completions per player, showing high engagement.
- **86 event info opens via TV and PDF checkpoints.**

Retention & Return

- 51.7% return rate (30 out of 58 users).
- Successfully built a voluntary habit of exploring campus events.

Thank You So Much!
